

SUSTAINABILITY

Our strategy for
a future worth living

STRATEGY “SUSTAINABILITY” FOR OECHSLE

IN GENERAL

- Responsible, sustainable action is necessary for our long-term success and growth.
- This creates new business opportunities, reduces emissions and negative impacts on people and the environment.
- For the benefit of our customers and to protect our environment, we put great importance to durable and high-quality products.

PRODUCT DEVELOPMENT & MANUFACTURING

- We develop and design long-lasting products for resource-optimized production, taking into account customer requirements. This is the best way to avoid unnecessary waste.
- Where appropriate and accepted by customers, we use recycled materials or materials made from renewable raw materials

MANUFACTURING

- We rely on energy-efficient machines (e.g. all-electric injection moulding machines, modern temperature control and drying equipment), effective production equipment (e.g. hot runner tools to prevent casting waste) and technologies (e.g. heat recovery from the production as heating for the entire site).
- We generate a part of our electricity demand with photovoltaics on the factory premises itself (> 15% of the annual demand).
- In addition, we continuously review and improve our processes in order to produce in an environmentally conscious, resource-saving and economical manner.

LOGISTICS

- We work with our customers to continuously optimize the packaging units.
- We bundle orders to reduce the necessary logistics trips.
- Recyclable materials are almost exclusively used for packaging.

THE END OF PRODUCT LIFE CYCLE

- We only use recyclable and reusable materials and components.
- We work closely with our customers to develop and implement sustainable, economical ways of disposal and recycling.
- Where appropriate, we take back products (e.g. LED displays) and rework them.
